

Cutter Reset Procedure

SumiMark IV Marking Systems

Overview:

This document provides step-by-step directions on how to reset the Cutter on the SumiMark IV Marking System. The Cutter Reset Button is a small, black push button which actuates and repositions the cutter to the home position. In rare cases, the cutter may need to be reset because it is out of range with the sensor.

Application:

To reset the Cutter, follow these steps:

1. Power the printer off. See visual reference on page 2.
2. Locate reset button on right side of Ribbon Payoff Spindle. See visual reference on page 3.
3. Hold the Cutter Reset Button down.
4. Power Off printer while holding down button.
5. Power printer back On. Printer should cycle one cut to reset itself
6. Release button.

*If cutter continuously cycles when powered back up, release the button when the blade is at its lowest point (not visible through the opening). This may take a few try's to properly reset the cutter.

Note: do not attempt to adjust the cutter sensor unless requested by a SumiMark technician.
